Referencing Media in WSFD

Created by Leena Khera
Last updated: Mar 26, 2021 by Mukesh Sah • 3 min read • 38 people viewed

This documentation covers the steps to add / update the media on the pharma website.

- Module install
- Field Format for Document field
- Adding/Uploading media with Download URL alias
- Adding/Uploading media without Download URL alias

Module install

- Login into the site as a Site Configurator user role
- Visit Extend (.../admin/modules), and install the **Media entity download** module.

The screenshot shows the 'Extend' module in the WSF administration interface. The 'Media entity download' module is highlighted in the list. Below the list, there is a detailed description of the module, its requirements, and its permissions. At the bottom, there is a blue 'Install' button.

Field Format for Document field

- Log in as Administrator user role.
- Navigate to /admin/structure/media/manage/document/display
- verify that the field format is 'Download Link' for field document in both default and embedded tabs.

The screenshot shows the 'Document' field configuration in the WSF administration interface. The 'Format' tab is selected, displaying various field settings such as Name, Author, Author on, Thumbnail, and Document. The Document field is set to 'Download link'.

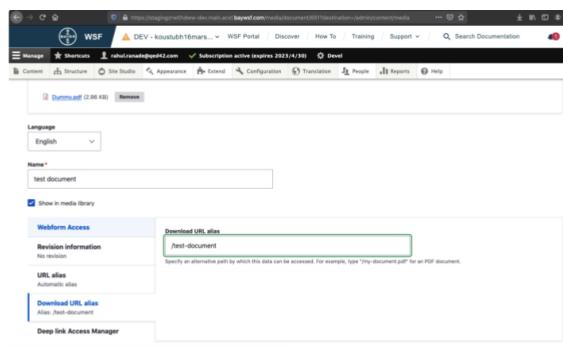

The screenshot shows the 'Document' field configuration in the WSF administration interface, specifically the 'Embedded' tab. It displays the same field settings as the 'Default' tab, including Name, Author, Author on, Thumbnail, and Document, all set to 'Download link'.

Adding/Uploading media with Download URL alias

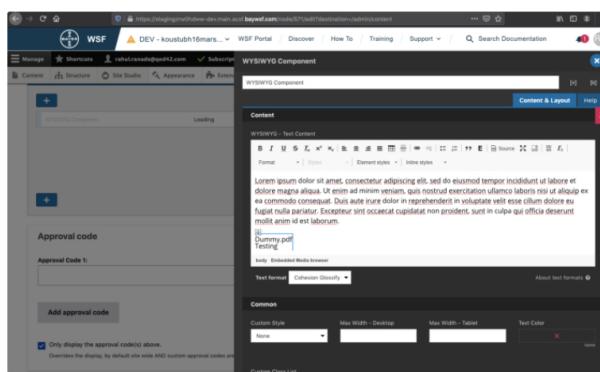

Log in as Administrator/Content Manager/Content Editor user

- > Log in as Administrator/Content Manager/Content Editor user.
- > Navigate to /media/add/document
- > Navigate to Document field and upload the document file.
- > Add url alias for document file in the field **Download URL alias**

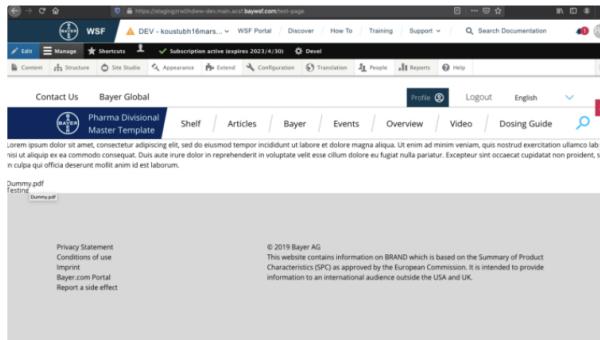

- > Create a page content and place the same media using **Media browser** tool in WYSIWYG editor and save it.

- > We can upload new Document file using **Media browser** tool in WYSIWYG editor like below.

- > View the page content and verify that the document link should be displayed as **Download URL alias** if alias url is added in media file.

Adding/Uploading media without Download URL alias

- > Log in as Administrator/Content Manager/Content Editor user.
- > Navigate to /media/add/document

- Navigate to Document field and upload the document file.
- Leave empty field **Download URL alias**

The screenshot shows the WSF portal interface for managing documents. A specific document named 'Testing Document' is selected. In the configuration section, the 'Download URL alias' field is highlighted with a blue border. Below it, there's a note: 'Specify an alternative path by which this data can be accessed. For example, type "/my-document.pdf" for an PDF document.' The status bar at the bottom indicates the document is 'Published'.

- Create a page content and place the same media using **Media browser** tool in WYSIWYG editor and save it.

The screenshot shows the WYSIWYG editor within the WSF portal. A document titled 'Edit Page Sample' is open. In the content area, there is a media file represented as 'sample_0.pdf'. The editor has various tools for text and media manipulation.

- View the page content and verify that if **Download URL alias** is not added in media file then document link should be displayed as media/(id)/download by default.

The screenshot shows the final published page. The media file 'sample_0.pdf' is displayed with its download link: 'www.bayer.com'. The page also includes a navigation menu with links like 'Contact Us', 'Bayer Global', 'Shelf', 'Articles', 'Bayer', 'Events', 'Overview', 'Video', and 'Dosing Guide'.
